

OTHER WESTERN CANADIAN WHEAT CLASSES

CNHR (*Canada Northern Hard Red*)

CNHR is a red spring wheat consisting of hard kernels. Introduced on August 1, 2016, the target quality of this class is for it to have sound kernels (good falling number), very good milling quality, with medium gluten strength (lower than both the CWRS and CPSR classes). Protein content of CNHR will be variable and span the protein content range of the CWRS and CPSR classes. There are three milling grades available.

Depending on protein content, CNHR will be suitable for the production of pan breads, hearth breads, flat breads and noodles. More information on end-product applications will be available in the future as quality analysis of this class is done to evaluate its performance in various products.
